

(a) normalised ω_z , $t/c = 2.35$

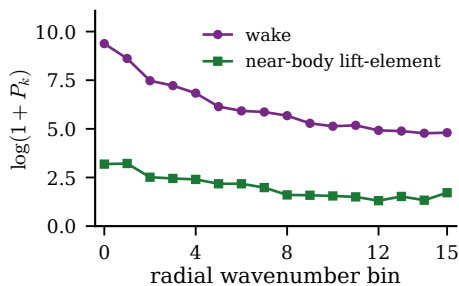

(b) wake: signed patch energies

(c) near-body: signed patch energies

(d) 16-bin radial spectra

each observable: 80-D=64 signed patch energies ($8 \times 4 \times \{+, -\}$, $\log_{10} p$) + 16-bin radial spectrum; case G-0.50_D1.00_Y-0.40 (test_b), encounter 0
