

(a) C_L RMSE by phase (test B, $n = 42$)(b) $C_L R^2$ by phase (test B, $n = 42$)

(c) impact-phase estimator ladder

(d) filter vs smoother (test B, $n = 42$)(e) NIS band calibration (validation, $n = 100$)

Protocol: $K = 8$ wall-pressure sensors, delay-10 embedding, $N = 64$ ensemble members, frozen decode-floor decoder.

(a, b) phase evaluation at the val-calibrated band $c = 1.77$; (c) frozen bands only; (e) selection on the validation split only.
